

Horse breeding center with livery yard Kumminui

# The location

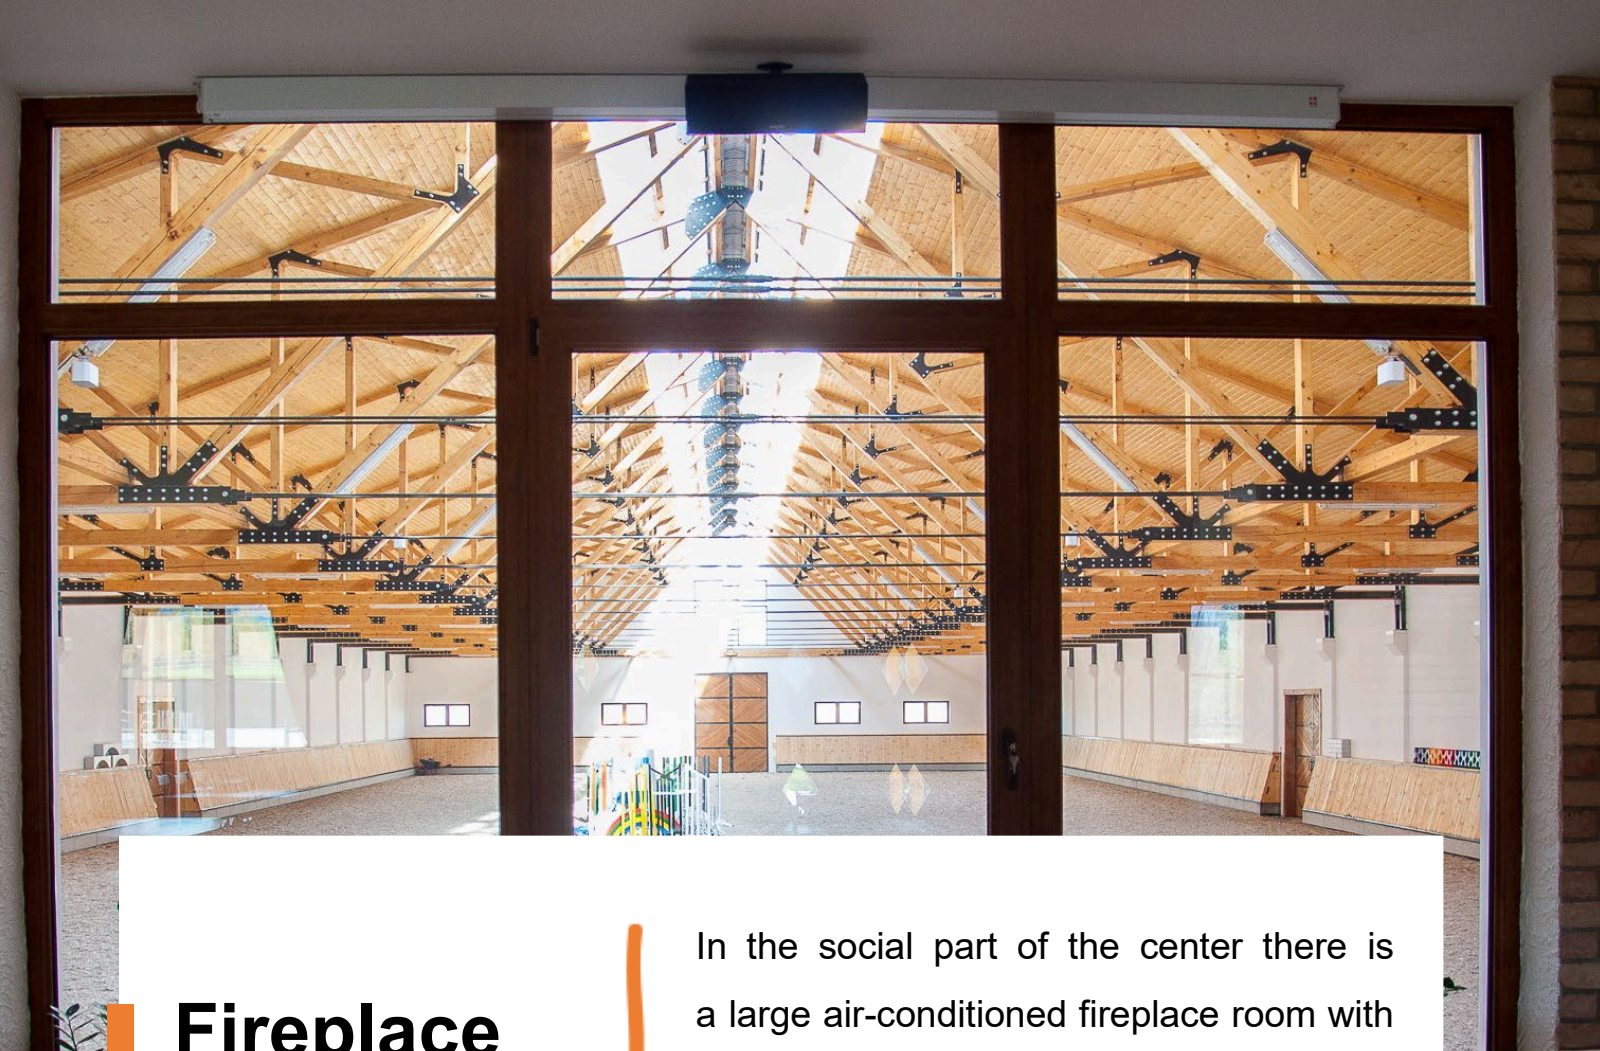

---

The stable is located in the southern part of Poland, in the picturesque town of Łazy (Silesian Voivodeship). The village is surrounded by mountains, specifically the Silesian Beskids. It is a several-year-old facility with a modern construction, fully adapted to horse breeding and use by both competitors and accompanying persons. The center includes, among others, large boxes, a comfortable wide corridor between the boxes, arcades, a full-size indoor arena and outdoor arenas with professional footing (fiber sand) and irrigation, lots of fields and quarters, tack room, washer with a solarium, laundry room and a social area where riders and guests can rest. A big advantage of the location of the center is the proximity to the S1 expressway (4 km).

# Horse stalls

Currently, the center has 48 stalls adapted to breeding horses. Each with an area exceeding 12m<sup>2</sup>.

## Fireplace room

In the social part of the center there is a large air-conditioned fireplace room with a roofed terrace, a view of the hall and riding arenas with access to the kitchen and toilets.

# Tack room

A large and spacious tack room adapted to store equestrian equipment for each horse.

# Solarium, internal and external washcloths

---

Solariums and washing machines with independent positions for cleaning and vacuuming horses are available to all customers inside the stable and also in the arcades.

## Indoor arena

A full-size hall (26x66m) inside the resort with a pleasant climate and plenty of light.

# Outdoor arenas

---

Two illuminated outdoor training arenas with professional ground, hydration and drainage: dressage 20x60m and jumping 40x60m.

# Year-round fields

---

In the spring/autumn season, there are evergreen fields equipped with automatic drinkers for both mares with foals and other horses. In winter, they are equipped with hay feeders. In addition, the resort has sand and grass quarters throughout the year (spring/autumn season).

# Horse walker, round pen

Auxiliary buildings for the development and training of both breeding and sports horses. Roofed horse walker and round pen with a diameter of 18m.

# Horse breeding

---

In the horse breeding center we have a certified semen collection point with the necessary laboratory and facilities enabling insemination of mares with both fresh and frozen semen. Every year our breeding center is supplied with several new foals. Our mares are inseminated mainly with high quality dressage stallions.

# Our stallion Lari Fari, 8yo bavarian stallion, Pink Floyd x Luis Figo

---

- 3-time Polish Champion of Young Horses

# Plans for further development

Construction began in 2023:

1. A new breeding stable with facilities for in-foal mares, mares with foals, weanlings and other young horses,
2. Feeding pens for youngsters,
3. Additional walker for 8 horses with an internal round pen,
4. Veterinary facilities with full equipment necessary to treat both own horses and those from outside,
5. Additional fields, sand and grass quarters.
